What is gravity-based storage & how does it work?

Other gravity-based storage companies have their own twists on the technology. The idea behind California-based Grav-ity Power is just a small step away from pumped hydro: It uses renewable energy to pump water under a heavy piston and lift it.

Do all energy storage facilities rely on gravity?

To be sure,nearly allthe world's currently operational energy-storage facilities,which can generate a total of 174 gigawatts,rely on gravity. Pumped hydro storage,where water is pumped to a higher elevation and then run back through a turbine to generate electricity,has long dominated the energy-storage landscape.
