Energy charged into the battery is added, while energy discharged from the battery is subtracted, to keep a running tally of energy accumulated in the battery, with both adjusted by the single value of measured Efficiency. The maximum amount of energy accumulated in the battery within the analysis period is the Demonstrated Capacity (kWh

A promising technology for performing that task is the flow battery, an electrochemical device that can store hundreds of megawatt-hours of energy -- enough to keep thousands of homes running for many hours on a single charge. Flow batteries have the potential for long lifetimes and low costs in part due to their unusual design.
