We propose to characterize a "business model" for storage by three parameters: the application of a storage facility, the market role of a potential investor, and the revenue stream obtained from its operation (Massa et al., 2017).

Are battery energy storage systems attractive for investors?

Conclusions Battery energy storage systems are considered one of the candidate solutions to integrate high amount of volatile RES into the electric grid. However, even if many BESS have already reached a high grade of maturity, they seem to be not attractive for the investors.

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

The large energy consumption of DCs is an ongoing trend [21, 22]. There have been many studies focusing on the cost of green power usage [23, 24], and the improvement of renewable energy accommodation level of data centers has been a hot spot in recent years [25, 26]. Recent works find out that DCs' power consumption from the traditional power grid can be ...
