The battery pack is generally fixed at the bottom of the car, below the passenger compartment, by means of bolt connections.

Which electric vehicles use a structural battery pack?

There is only one vehicle that uses a structural battery pack. It is the Texas-made 2022 Tesla Model Y. Giga Berlin will also start producing electric vehicles with structural packs in the coming months. Tesla will improve its existing EVs such as Model 3 and Model S/X with the new pack in the near future.
