Will Vattenfall build a power-to-heat E-boiler?

Vattenfall has been granted permit and Dutch SDE++subsidy to build a 150 MW "Power-to-Heat" E-boiler at the company's heat and power plant Diemen in Amsterdam. The final investment decision is scheduled for mid-2022, after the recently initiated tender has been completed.

Does Vattenfall have an electric boiler?

Vattenfall currently has a 120 MW electric boiler in Berlin, but none yet in the Netherlands. An electric boiler converts electricity into heat that can be supplied to household and business customers or stored in the heat buffer already present in Diemen, south east of Amsterdam city.

How does an electric boiler work?

The electric boiler only operates when the electricity mix is sustainable, produced from solar and wind power, and has a low cost. "The location in Diemen is ideal for the electric boiler because it is close to the electricity and heat grids, and because we can store excess heat in the heat buffer," says Poorte.

How many megawatts can a boiler handle?

"We received the permit for a boiler with a maximum capacity of 200 megawatts in early October," says Michelle Poorte, project manager for heat projects at Vattenfall Heat Nederland.

By moving to electric heating with a renewable energy tariff, you'll not only be moving to carbon-free heating but doing your bit for a renewable future! ... If using a cylinder for hot water storage, this is the ideal time to heat your water at a lower cost than normal. Some night time tariffs are as low as 5.6p/kwh.

2 · An electric boiler heats water using electricity and circulates that warm water through radiators or underfloor heating pipes. Usually, these systems include a large hot water cylinder to store the heat, and are paired with special electric meters, which provide cheaper electricity units at certain times of day.

The Dutch energy storage market has picked up in the past 12 months after years of being decried as a laggard compared to its neighbours Belgium and Germany. Projects with capacities of multiple hundreds of gigawatts have moved forward recently as reported by Energy-Storage.news, helped by reforms of the country's grid fee system, often ...
