Can compressed air energy storage systems be used for air conditioning?

This work presents findings on utilizing the expansion stage of compressed air energy storage systems for air conditioning purposes. The proposed setup is an ancillary installation to an existing compressed air energy storage setup and is used to produce chilled water at temperatures as low as 5 °C.

Does a compressed air energy storage system have a cooling potential?

This work experimentally investigates the cooling potential availed by the thermal management of a compressed air energy storage system. The heat generation/rejection caused by gas compression and decompression, respectively, is usually treated as a by-product of CAES systems.

What is ice storage air conditioning?

Ice storage air conditioning is the process of using ice for thermal energy storage. The process can reduce energy used for cooling during times of peak electrical demand. Alternative power sources such as solar can also use the technology to store energy for later use.

How to provide daily cooling load in a building?

Thus, in terms of methods for providing daily cooling load in the building, CTES systems can be divided into three main groups: eutectic salt thermal storage, ice thermal-energy storage (ITES) and chilled-water storage (CWS) [9]. Among them, ITES is more common because it is simple and cost-effective, and uses small storage tanks [10,11].

Why is energy storage important for air conditioning?

This reduces the reliance on conventional air conditioning units, which are the major consumers of electrical power. Also, the energy storage process has seen around 4% enhancement in roundtrip efficiency by employing the air heating by chilling the water for air conditioning purposes.

Can thermal management of compressed air energy storage systems provide alternative cooling methods?

That is equivalent to 345.8 Wh and 318.16 Wh respectively (3320/3600 °C; 375 °C). This work examined the potential of using the thermal management of compressed air energy storage systems to provide an alternative to conventional cooling methods.
