What should a battery compartment be made of?

Battery compartments Batteries should never be covered with plastic and synthetic sheets . Storage shelves must be made of a material resistant to that battery's electrolyte. Appropriate materials could be steel, wood, or plastic such as polyethylene and polypropylene [1].

What is energy storage capacity?

Energy storage capacity is a battery's capacity. As batteries age, this trait declines. The battery SoH can be best estimated by empirically evaluating capacity declining over time. A lithium-ion battery was charged and discharged till its end of life.
