Troubleshooting and possible solutions Please first check to ensure that the inverter DSP board is seated properly - it should be pushed in completely with all ribbon cables connected and not loose. If the board appeared to be loose or not connected, then check to see if the inverter comes out of PID Repairing before proceeding.

Conclusion. If you're a solar power enthusiast, you might be aware of the importance inverters play in making your system work properly. If you're having inverter troubles, and you can't find the fix in your owner's manual, take a look through this list of problems and solutions to see if it's something relatively easy to fix.
