

Who is Seiko Instruments Inc (SII)?

Seiko Instruments Inc. (SII) official site. SII is based on more than seven decades of dependable precision timepiece design, development and manufacturing. SII will continue to develop advanced micro mechanical, and low power consumption leveraging our precision instrument manufacturing expertise.

What does Seiko Holdings do for the environment?

The Seiko Holdings Group's "Initiatives for Climate Change and a Decarbonized Society" are among the Group's key materiality issues for environmental responsibility. As a result, the Group is actively expanding the introduction of renewable energy to achieve carbon neutrality by 2050.

What type of capacitor does Seiko use?

It can store energy when it is charged and will release energy when discharged. Seiko used two types of capacitors for its early Kinetics and A.G.S/Auto Quartz (pre-Kinetic) models. The earlier type was outsourced from the established Japanese electronics giant, Matsushita Electric, which is now known as Panasonic.

Does Seiko have a small oscillating weight?

A small oscillating weight translates into less efficiency in charging the watch. Seiko does have quartz calibers meant only for women's watches but lately the company has also used the 7T92 chronograph movement designed for gents' models. Ladies' watches using the 7T92 quartz movement are usually larger than traditional ladies' models.

Why did Seiko use a lithium ion cell instead of a capacitor?

In place of the capacitor, Seiko decided to use a rechargeable titanium lithium ion cell (LiOn) as replacement. Rather than spend money to self-manufacture the LiOn cells, Seiko chose to outsource them from Maxell Corp, a renowned Japanese battery and computer media manufacturer.

Does Seiko have a direct drive kinetic movement?

Very recently Seiko released a variation of its Kinetic movement - the Direct Drive Kinetic. It first debuted with the SRH-series Velatura yacht sports watches with the 5D44 caliber and shortly thereafter added the 5D22 caliber, without the retrograde day-of-week display.

Can be mounted by reflow soldering (MS-R version)-20°C to +60°C operating temperature range; Large discharge capacity for high operational voltage range of 2.0V to 3.3V

Small products, big performance. Our electronic components from tuning fork quartz crystals with plastic mold, ceramic or cylinder type package, to silver oxide batteries, from chip capacitors to coin rechargeable batteries - all our technologies come from our watch manufacturing history.

So did Kintaro Hattori, who in 1881 established SEIKO, now one of the leading brands in time measurement worldwide. With that same spirit and determination, we at SEIKO Instruments today develop and manufacture industrial printheads, thermal printers, electronic components, and motion devices for manufacturing, retail and medicine.
