Among them, Pumped Hydro Energy ...

When an ideal inductor is connected to a voltage source with no internal resistance, Figure 1(a), the inductor voltage remains equal to the source voltage,  $E$  such cases, the current,  $I$ , flowing through the inductor keeps rising linearly, as shown in Figure 1(b). Also, the voltage source supplies the ideal inductor with electrical energy at the rate of  $p = E \cdot I$ .
