We also consider the installation of commercial and industrial PV systems combined with BESS (PV+BESS) systems (Figure 1). Costs for commercial and industrial PV systems come from NREL's bottom-up PV cost model (Feldman et al., 2021). We assume an inverter/load ratio of 1.3, which when combined with an inverter/storage ratio of 1.67 sets the BESS power capacity at ...

Energy storage system costs stay above \$300/kWh for a turnkey four-hour duration system. In 2022, rising raw material and component prices led to the first increase in energy storage system costs since BNEF started its ESS cost survey in 2017. Costs are expected to remain high in 2023 before dropping in 2024.

Global Energy Storage Market Overview: The Energy Storage Market size was valued at USD 31,413.43 Million in 2023. The energy storage industry is projected to grow from USD 39,411.29 Million in 2024 to USD 2,41,915.04 Million by 2032, exhibiting a compound annual growth rate (CAGR) of 25.46% during the forecast period (2024 - 2032).

1. Define energy storage as a distinct asset category separate from generation, transmission, and distribution value chains. This is essential in the implementation of any future regulation governing ESS.
2. Adopt a comprehensive regulatory framework with specific energy storage targets in national energy
