

# Energy storage project planning trend forecast

What do we expect in the energy storage industry this year?

This report highlights the most noteworthy developments we expect in the energy storage industry this year.

Prices: Both lithium-ion battery pack and energy storage system prices are expected to fall again in 2024.

What is the future of energy storage?

Commercial and industrial (C&I) ESS is experiencing a surge in growth, entering a phase of rapid development. The increase in installations for utility-scale ESS far outpaces that of other types. In the realm of residential energy storage, projections for new installations in 2024 stand at 11GW/20.9GWh, reflecting a modest 5% and 11% increase.

How big will energy storage be in 2024?

According to Trendforce projections, new installations of global energy storage are poised to reach 74GW/173GWh in 2024, marking a year-on-year growth of 33% and 41%, respectively. While maintaining a notable increase, the growth rate is expected to slow down slightly.

Which long-duration energy storage technologies have a critical year ahead?

Beyond lithium-ion batteries, other long-duration energy storage (LDES) technologies have a critical year ahead. China has forged ahead with its LDES development and will remain the frontrunner this year, even as US, UK, Australia and other markets support LDES growth.

How many new energy storage projects are commissioned in China?

Figure 2: Cumulative installed capacity of new energy storage projects commissioned in China (as of the end of June 2023) In the first half of 2023, China's new energy storage continued to develop at a high speed, with 850 projects (including planning, under construction and commissioned projects), more than twice that of the same period last year.

What is the cumulative installed capacity of energy storage projects?

The cumulative installed capacity of new energy storage projects is 21.1GW/44.6GWh, and the power and energy scale have increased by more than 225% year-on-year. Figure 1: Cumulative installed capacity (MW%) of electric energy storage projects commissioned in China (as of the end of June 2023)

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

The European region leads the world in planning for the new energy transition, and TrendForce projects that the fresh installed energy storage capacity in Europe will hit 16.8 GW/30.5 GWh in 2024, marking a robust

# Energy storage project planning trend forecast

year-on-year growth of 38% and 53%. ... setting the stage for a strong upward trend. Forecasts on the Installed Capacity in the ...

According to statistics from the CNESA global energy storage project database, by the end of 2020, total installed energy storage project capacity in China (including physical energy storage, electrochemical energy storage, and molten salt heat storage projects) reached 33.4 GW, with 2.7GW of this comprising newly operational capacity.

16 hours of energy storage in the upcoming projects in the UAE and Morocco. Today the total global energy storage capacity stands at 187.8 GW with over 181 GW of this capacity being attributed to pumped hydro storage systems. So far, pumped hydro storage has been the most commonly used storage solution. However, PV-plus-storage, as well as CSP

The North America and Western Europe (NAWE) region leads the power storage pipeline, bolstered by the region's substantial BESS segment. The region has the largest share of power storage projects within our KPD, with a total of 453 BESS projects, seven CAES projects and two thermal energy storage (TES) projects, representing nearly 60% of the global ...

The current energy structure of South Africa has deviated from the "IRP-2019" power plan formulated by the South African government, so the deployment progress of large-scale storage projects needs to be accelerated. At present, the only solution to South Africa's energy dilemma in the short term is the energy storage system.

The urgency for developing energy storage in North America, along with the economics of energy storage projects, surpasses that of Latin America. Latin America faces constraints such as limited available land and the absence of a regulatory system, making it a longer journey to reach the period of installed demand for energy storage volume.

ARPA-E Advanced Research Projects Agency - Energy BNEF Bloomberg New Energy Finance ... Cost and technology trends for lithium-based EV batteries 19 Figure 19. ... Energy Storage Grand Challenge Energy Storage Market Report 2020 December 2020 Figure 43.

The energy storage projects we encounter on the Polish market are of great diversity, ranging from battery storage facilities with relatively small total installed capacities, through contracts focusing on the joint development of specific technologies (hydrogen, ammonia) for commercial use, to large energy storage facilities within pumped ...

In BloombergNEF's 2H 2023 Energy Storage Market Outlook report, the firm forecasts that global cumulative capacity will reach 1,877GWh capacity to 650GW output by the end of 2030, while DNV's annual Energy Transition Outlook predicts lithium-ion battery storage alone will reach 1.6TWh by 2030.

# Energy storage project planning trend forecast

The newly commissioned scale is 8.0GW/16.7GWh, higher than the new scale level last year (7.3GW/15.9GWh). The newly-added projects were mainly put into operation in June, and the capacity reached ...

Major European countries witness a surge in demand for large-scale energy storage driven by government bidding projects and market initiatives. The versatility of large-scale energy storage projects, applicable both on the grid and power sides, contributes to their robust growth. Forecasts on Energy Storage Installations for 2024 in the U.K

Energy is essential in our daily lives to increase human development, which leads to economic growth and productivity. In recent national development plans and policies, numerous nations have prioritized sustainable energy storage. To promote sustainable energy use, energy storage systems are being deployed to store excess energy generated from ...

Projects delayed due to higher-than-expected storage costs are finally coming online in California and the Southwest. Market reforms in Chile's capacity market could pave the way for larger energy storage additions in Latin America's nascent energy storage market. We added 9% of energy storage capacity (in GW terms) by 2030 globally as a ...

Many provinces have already unveiled their 14th Five-Year Plan for new energy storage development, sparking a surge in large-scale storage projects. As of March 2023, an impressive 19 provinces and autonomous regions in China have released their 14th Five-Year Plan for new energy storage development, indicating the significant momentum behind ...

The U.S. added 148.1MW capacity of energy storage installations in January. In January 2024, the United States saw an increase in energy storage installations, adding 148.1MW of capacity. However, this marked an 88% decrease from the previous month's figure of 1,231MW in December 2023.

For instance, Xcel Energy plans to leverage up to US\$10 billion in available IRA tax credits to help fund its US\$15 billion clean energy plan for Colorado. 74 And NextEra Energy substantially increased its renewable energy and electric transmission and distribution grid investments based on IRA and IIJA funding and tax credits. 75 Figure 7 ...

The Energy Information Administration expects renewable deployment to grow by 17% to 42 GW in 2024 and account for almost a quarter of electricity generation. 5 The estimate falls below the low end of the National ...

3 MEMBER TECHNOLOGY SPOTLIGHT The following is a small sample<sup>2</sup> of projects from different regions that highlight the variety of solutions energy storage provides to both customers and the energy grid.<sup>3</sup>

# Energy storage project planning trend forecast

ATCO - SADDLE HILLS, CANADA In 2016, ATCO energized Western Canada's largest off-grid solar project,

In its draft national electricity plan, released in September 2022, India has included ambitious targets for the development of battery energy storage. In March 2023, the European Commission published a series of recommendations on policy actions to support greater deployment of electricity storage in the European Union

This volume comprises three chapters: Chapter 1 presents transition pathways to 2030 and 2050 under the Planned Energy Scenario and the 1.5°C Scenario, examining the required technological choices and emission mitigation measures to achieve the 1.5°C Paris climate goal. In addition to the global perspective, the chapter presents transition pathways at the G20 level, and ...

Residential storage dominated this growth trend. TrendForce anticipates further expansion in 2024, with Italy projected to add 2.6GW/6.2GWh of ESS capacity. ... Energy Storage in Italy: Policy Dynamics Impact Residential Installations. ... South Africa's Hybrid Power Projects and 1.14GWh Energy Storage Capacity: Exploring Opportunities in the ...

Battery Storage in the United States: An Update on Market Trends. Release date: July 24, 2023. This battery storage update includes summary data and visualizations on the capacity of large-scale battery storage systems by region and ownership type, battery storage co-located systems, applications served by battery storage, battery storage installation costs, and small-scale ...

The cumulative installed capacity of new energy storage projects is 21.1GW/44.6GWh, and the power and energy scale have increased by more than 225% year-on-year. ... In the first half of 2023, China's new energy ...

The emergence of Storage as a Service models are anticipated, allowing businesses to access the benefits of energy storage without upfront costs. This innovative financial model will allow manufacturers to retain ownership and full visibility of their batteries through the entire life cycle, ensuring compliance with their environmental obligations whilst still realising ...

The scale of energy storage projects is on the rise, propelling Europe to the forefront of the world's new energy transformation planning. In light of this, TrendForce anticipates a substantial increase in new energy storage installations in Europe, expecting to reach 16.8 GW/30.5 GWh - a notable surge of 38% and 53%, sustaining a period of ...

It is expected that in 2025, the annual new installations of new energy storage globally and in China may exceed 60GW and 31GW respectively, and are expected to reach 67GW and 35GW. Chart: Forecast on global and domestic new energy storage installations from 2023 to 2030 (Unit: GW) Market share of different new

energy storage technologies

Consumers are demanding more options. Expert commentators like Navigant Research estimate that energy storage will be a US\$50 billion global industry by 2020 with an installed capacity of over 21 Gigawatts in 2024. There are many issues to consider when developing and financing energy storage projects, whether on a standalone or integrated basis.

But a 2022 analysis by the McKinsey Battery Insights team projects that the entire lithium-ion (Li-ion) battery chain, from mining through recycling, could grow by over 30 percent annually from 2022 to 2030, when it would reach a value of more than \$400 billion and a market size of 4.7 TWh. <sup>1</sup> These estimates are based on recent data for Li-ion ...
