A key component of that is the development, deployment, and utilization of bi-directional electric energy storage. To that end, OE today announced several exciting developments including new funding opportunities for energy storage innovations and the upcoming dedication of a game-changing new energy storage research and testing facility.

Water for the Goldendale Energy Storage project would be drawn from the Columbia River under a permit that once served the aluminum plant. FFP Project plans to purchase water from the Klickitat Public Utility District. Project plans call for the lower reservoir to be filled once, with annual supplemental fills.

Federal Cost Share: Up to \$30.7 million Recipient: Wisconsin Power and Light, doing business as Alliant Energy Locations: Pacific, WI Project Summary: Through the Columbia Energy Storage project, Alliant Energy plans to demonstrate a compressed carbon dioxide (CO₂) long-duration energy storage (LDES) system at the soon-to-be retired coal-fired Columbia Energy Center ...

Technical Report: Moving Beyond 4-Hour Li-Ion Batteries: Challenges and Opportunities for Long(er)-Duration Energy Storage This report is a continuation of the Storage Futures Study and explores the factors driving the transition from recent storage deployments with 4 or fewer hours to deployments of storage with greater than 4 hours.

LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage. DOE divides energy storage ...

This report describes the development of a method to assess battery energy storage system (BESS) performance that the Federal Energy Management Program (FEMP) and others can use to evaluate performance of deployed ...

This is the fifth study in the Energy Storage Financing Study series, which is designed to investigate challenges surrounding the financing of energy storage projects in the U.S., promoting greater technology and project risk transparency, reducing project transaction costs, and supporting a level playing field for innovative energy storage ...

To achieve net-zero emissions by midcentury, the United States will need to capture, transport, and permanently store hundreds of millions of tons of carbon dioxide (CO₂) each year. This will require developing the infrastructure and management practices that will be needed to store large quantities of CO₂ at
