Flywheels also made of high-strength steel. The composite flywheel is meant for use in vehicle energy storage and braking systems. The power of a flywheel is determined by the maximum amount of energy that it can store per unit load. Common Problems of Flywheel. Following are the faults that occur when a flywheel is defective: Clutch dragging

Flywheel Energy Storage (FES) systems refer to the contemporary rotor-flywheels that are being used across many industries to store mechanical or electrical energy. Instead of using large iron wheels and ball bearings, advanced FES systems have rotors made of specialised high-strength materials suspended over frictionless magnetic bearings ...
