Solar power storage is capturing energy from the sun and its conversion into a form you can store for later use. Solar energy can be stored in various ways, including in batteries, heat, or plant matter.. When solar energy is converted into electricity, it can be stored in batteries like those used in standard devices such as cell phones and laptops.

Situated on Hawaii's "garden isle" Kauai, Tesla has installed Powerpacks to store energy generated from solar power during the day for use during the evening, reducing the island state's reliance on fossil fuels. The project consists of a 52MWh, 272-unit Tesla Powerpack installation with a 18MW solar farm comprising of around 55,000 panels.

They retain this electricity safely until they are "discharged". A solar battery can therefore receive excess solar energy from solar panels. This excess energy is fed from the solar panels through the solar inverter(s), whereby it is converted from direct current (DC) to alternating current (AC) and stored in the battery.
