As the world shifts towards renewable energy sources like wind and solar, Battery Energy Storage Systems (BESS) have emerged as a pivotal technology for modern energy management. BESS play a crucial role in addressing this need by storing excess energy generated during periods of low demand and releasing it during peak demand periods.

FESS has a unique advantage over other energy storage technologies: It can provide a second function while serving as an energy storage device. Earlier works use flywheels as satellite attitude-control devices. A review of flywheel attitude control and energy storage for aerospace is given in [159].
