

How much carbon is stored in coastal Jiangsu?

As indicated in Table 2, the total carbon storage in coastal Jiangsu in 2010 was 29,759.07 $\times 10^4$ t. Within ten years, variations in carbon storage mainly resulted from vegetation changes in new land-use areas.

Does land-use change affect carbon storage dynamics in the Jialing River basin?

The Jialing River Basin (JRB), with a total area of $\sim 160,000$ km², diverse topography, and elevation differences exceeding 5 km, is an ideal case for understanding the complex interactions between land-use change and carbon storage dynamics. Taking the JRB as our study area, we analyzed land-use changes from 2000 to 2020.

How can a soil improve carbon storage in coastal Jiangsu?

For soils, the effects of returned crop residues and straw, long-term use of organic fertilisers and flooding of paddy land in our study area can also enhance carbon storage [21,22]. Built-up land has a vegetation carbon density similar to wetlands. This is due to the high vegetation coverage rate in coastal Jiangsu.

Can geothermal energy storage be used in large-scale energy storage?

The Geothermal Energy Storage concept has been put forward as a possibility to store renewable energy on a large scale. The paper discusses the potential of UTES in large-scale energy storage and its integration with geothermal power plants despite the need for specific geological formations and high initial costs.

DOI: 10.1002/smt.202300261 Corpus ID: 258988696; Charges Transfer in Interfaces for Energy Generating @article{Jiang2023ChargesTI, title={Charges Transfer in Interfaces for Energy Generating}, author={Yisha Jiang and Yitian Wu and Guoheng Xu and Senyao Wang and Tingting Mei and Nannan Liu and Tao Wang and Yude Wang and Kai ...

The heat from solar energy can be stored by sensible energy storage materials (i.e., thermal oil) [87] and thermochemical energy storage materials (i.e., $\text{CO}_3\text{O}_4/\text{CoO}$) [88] for heating the inlet air of turbines during the discharging cycle of LAES, while the heat from solar energy was directly utilized for heating air in the work of [89].

Energy storage is an important adjustment method to improve the economy and reliability of a power system. Due to the complexity of the coupling relationship of elements such as the power source, load, and energy storage in the microgrid, there are problems of insufficient performance in terms of economic operation and efficient dispatching. In view of this, this ...

International journal of heat and mass transfer 138, 1178-1187, 2019. 130: ... Y Wang, P Peng, W Cao, T Dong, Y Zheng, B Lei, Y Shi, F Jiang. Applied Thermal Engineering 180, 115772, 2020. 48: 2020: A novel entropy-based fault diagnosis and inconsistency evaluation approach for lithium-ion battery energy storage

The two steps required to transfer thermal energy are the extraction of groundwater from the aquifer and its subsequent reinjection at a different well nearby, where its temperature has been altered. ... Borehole Thermal Energy Storage (BTES) Minimal land footprint, compact design: Site subsurface constraints ... W. Jiang, L. Tian, J. Tian ...

Prof. Peixue Jiang is a professor and Dean of the Department of Energy and Power Engineering, Tsinghua University, China. He is the Director of Institute of Engineering Thermophysics in Department of Energy and Power Engineering, Director of Key Laboratory for Thermal Science and Power Engineering of Ministry of Education, Director of Beijing Key Laboratory of CO₂ ...

Guanghui Jiang; Yang Yuting; Yaya Tian ... simulated the resource storage and energy flow state in the land transfer process, and finally compared and discussed the economic and ecological ...

Increasing research interest has been attracted to develop the next-generation energy storage device as the substitution of lithium-ion batteries (LIBs), considering the potential safety issue and the resource deficiency [1], [2], [3] particular, aqueous rechargeable zinc-ion batteries (ZIBs) are becoming one of the most promising alternatives owing to their reliable ...

Recent theoretical studies dealing with the novel scheme for earth-deep hot dry rock geothermal energy extraction based on the use of a super-long heat pipe indicate its superior technical viability.

The nearly zero energy building (NZEB) is known for the low energy demand and better thermal insulation, thus it is promising to explore the thermal storage potential, and the flexible thermal ...

The next step for China's clean energy transition: industrial and commercial storage deployment. In China, generation-side and grid-side energy storage dominate, making ...

A very competitive energy density of 577 Wh L⁻¹ can be reached, which is well above most reported flow batteries (e.g. 8 times the standard Zn-bromide battery), demonstrating that the nitrogen cycle with eight-electron transfer can offer promising cathodic redox chemistry for safe, affordable, and scalable high-energy-density storage devices.

As an important means of farmland policy, whether land transfer can promote agricultural green transformation is worthy of further study; however, related research is relatively rare. Based on the

inter-provincial panel data from 2005 to 2020, this paper examines the influence of land transfer on agricultural green transformation and its underlying mechanism by ...

Abstract Sodium-ion batteries are expected to replace lithium-ion batteries in large-scale energy storage systems due to their low cost, wide availability, and high abundance. ... 7 The different mixed valences of transition metal ions also affect the energy transfer rate and other properties of ... Shikang Jiang is an MS from Nanjing ...

P plays two main roles in plant biochemistry - as a structural component in DNA and RNA, and as a metabolic energy unit in ATP for energy transfer (Hawkesford et al., 2012) - in addition to other structural components such as phospholipids in cell membranes. These roles contrast with those of N, which is primarily a component of enzymes.

Semantic Scholar extracted view of "Intercalation pseudocapacitance in electrochemical energy storage: recent advances in fundamental understanding and materials development" by Yu Liu et al. ... recent advances in fundamental understanding and materials development}, author={Yu Liu and San Ping Jiang and Zongping Shao}, year={2020}, ...

INVITED PAPER Energy Storage via Carbon-Neutral Fuels Made From CO₂, Water, and Renewable Energy This paper highlights how a versatile energy carrier can be produced by recycling CO₂ and combining it chemically with a substance of high chemical bond energy created from renewable energy.

Optimal planning of multi-time scale energy storage capacity of cross-national interconnected power system with high proportion of clean energy. H Jiang, E Du, C Jin, J Xiao, J Hou, N Zhang ... H Jiang, X Lan, J Wang, H Wei, E Du, Y Wang, G Strbac, N Zhang. Available at SSRN 4663998, 0. The system can't perform the operation now. Try again later.

Thermal energy storage (TES) plays an important role in addressing the intermittency issue of renewable energy and enhancing energy utilization efficiency. This study focuses on recent ...

Therefore, thermal energy storage has been widely used to provide a reliable thermal performance and stable power production. ... addressing spatiotemporal energy transfer imbalances. However, enhancing heat transfer in pure phase-change materials (PCMs) has been challenging due to their low thermal conductivity. ... Defeng Li, Jun Shen, Xuejun ...

Triboelectric nanogenerators (TENGs) are emerging as a form of sustainable and renewable technology for harvesting wasted mechanical energy in nature, such as motion, waves, wind, and vibrations. TENG devices generate electricity through the cyclic working principle of contact and separation of tribo-material couples. This technology is used in ...

This paper optimises projected land-use structure in 2020 with the goal of increasing terrestrial ecosystem

carbon storage and simulates its spatial distribution using the ...

Zhu Jiang. Southeast University, School of Energy & Environment, 210096 Nanjing, China. Ministry of Education of China, Engineering Research Center of BEEE, 210096 Nanjing, China. Search for more papers by this author. Xinyi Li, ... and thermochemical thermal energy storage (TES) materials with special focus on the role of particle technology ...

Carbon storage services play an important role in maintaining ecosystem stability. Land use/cover change (LUCC) is the main factor leading to changes in ecosystem carbon storage. Understanding the impact of LUCC on regional carbon storage changes is crucial for protecting regional ecosystems and promoting sustainable socio-economic development. This ...
