If we only look at the Ancillary Services energy storage systems typically enter into - Regulation Up and Down, Responsive Reserve (PFR), ECRS, and Non-Spinning Reserve - then saturation looks likely to hit in June 2024. The "unrealistic" scenario: capacity reserved for Ancillary Services vs. Ancillary Service requirements.

When MISO launched the wholesale energy market in 2005 and ancillary services markets in 2009, the grid predominantly relied on dispatchable thermal units, used a centralized generation model, and planned for mostly inelastic load. Nodal energy pricing accounted for congestion and provided a way to meet local needs while optimizing globally.
