### Nanya energy storage technology

What makes Nanya a smart factory?

Nanya's 12-inch wafer fab is equipped with complete infrastructure for smart factory, including automated production lines, IIoT, and big data analytics. We further enhance yield, quality and output with AI applications, including predictive maintenance, production planning optimisation, quality inspection, yield analysis.

Why should you support Nanya?

By supporting these activities, we aim to encourage experimentation and unorthodox thinking. Nanya's 12-inch wafer fab is equipped with complete infrastructure for smart factory, including automated production lines, IIoT, and big data analytics.

What is Nanya's open innovation program?

Through customized Wafer Level Packaging and multiple application products developed rapidly with downstream system developers, Nanya has launched new open innovation programs every year in the past four years in order to conform with the Company's short, medium, and long-term R&D plans.

How do energy storage technologies affect the development of energy systems?

They also intend to effect the potential advancements in storage of energy by advancing energy sources. Renewable energy integration and decarbonization of world energy systems are made possible by the use of energy storage technologies.

What are the applications of energy storage technology?

Energy storage technologies have various applications in daily life including home energy storage,grid balancing, and powering electric vehicles. Some of the main applications are: Mechanical energy storage system Pumped storage utilizes two water reservoirs at varying heights for energy storage.

What is Nanya's role in R&D and production?

Nanya has created many patents through the cooperation with world-class entities, technology transfer, and joint execution of R&D plans, and has acquired these patents. As of 2020, Nanya has obtained as many as over 4,000 patents, which is hugely beneficial to R&D and production.

Last month marked the two-year anniversary since the passing of Illinois" large energy bill titled the Clean Energy Jobs Act (CEJA) that included incentives to offset the costs of installing solar. If your commercial property is in Illinois and you are interested in learning more about the qualifying incentive amounts for your buildings, contact us for a free solar study that includes ...

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.
