Are battery energy storage systems "green-adjacent" on Long Island?

On Long Island, communities from Hempstead to Southold are witnessing the introduction of a previously unfamiliar form of Green-adjacent technology in the form of Battery Energy Storage Systems, or "BESS". I refer to BESS facilities as "Green-adjacent" because, unlike wind and solar farms, they do not produce electricity of their own.

Are battery energy storage systems the new 'green-adjacent' technology?

But as the push to expand Green Energy production grows, so too will the prevalence of the technologies needed to support the industry. On Long Island, communities from Hempstead to Southold are witnessing the introduction of a previously unfamiliar form of Green-adjacent technology in the form of Battery Energy Storage Systems, or "BESS".

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

The average price per watt of solar power in New Hyde Park, NY is \$3.19/W. These prices are before incentives. After the federal solar tax credit, the final cost will drop by 30%, down to \$20,963 for a 9.38 kW system. Many states even offer local rebates and incentives that lower the price further--sometimes by thousands of dollars.
