It remains a little baffling that storage gets such a cursory treatment in the IEA Renewables 2023 report, but at the same time, the essential role of long-duration energy storage is at least highlighted. Towards the beginning of last year, we and others in the industry were asking if 2023 would be the Year of Long-Duration Energy Storage.

Whether it's Play God Day or not, we can't act in some all-knowing, all-seeing capacity and sweep away all obstacles to renewable energy deployment and to decarbonisation of the electric grid. ... Again, though energy storage is mentioned in the actual report - albeit briefly for something of such apparent importance - it is not ...

This Friday Briefing looks at the IEA's recognition that long-duration energy storage will be essential to global decarbonisation and asks what it might take for that message to translate into immediate action.

Introduction. With the increasing demand for wearable electronic devices, there is a growing need for flexible and portable power sources. 1 - 5 Lithium-ion batteries are extensively employed in portable power sources due to their high energy density and low self-discharge rate. 6, 7 Meanwhile, aqueous energy storage devices have exhibited remarkable ...
