Why are lithium batteries important for energy storage?

Among the various battery types, lithium batteries are playing an increasingly important role in electrical energy storage because of their high specific energy (energy per unit weight) and energy density (energy per unit volume).

How do battery and capacitive materials store energy?

Battery materials store large amounts of energy ($\sim 200 \text{ Wh kg}^{-1}$) through diffusion-limited redox reactions, which results in slow charging (on the order of hours) 3. By contrast, capacitive materials store much smaller amounts of energy ($\sim 5 \text{ Wh kg}^{-1}$) very rapidly (on the order of seconds) through the formation of electrical double layers 6.

How do rechargeable batteries store energy?

Rechargeable batteries, or secondary batteries, store energy through reversible electrochemical redox reactions in electrodes under an applied voltage and current (Fig. 2c). As chemical reactions occur in the bulk of the electrode materials, batteries can deliver very high energy densities (up to $\sim 300 \text{ Wh kg}^{-1}$).

From mobile devices to the power grid, the needs for high-energy density or high-power density energy storage materials continue to grow. Materials that have at least one dimension on the nanometer scale offer opportunities for enhanced energy storage, although there are also challenges relating to, for example, stability and manufacturing.

For transportation applications, we collaborate with researchers across the country on large energy storage initiatives. We lead national programs like the Battery 500 Consortium to improve energy storage for electric vehicles. The goal is to more than double the energy output per mass compared to existing batteries.

As expected, (CF) n /Li battery has a high practical energy density ($>2000 \text{ Wh kg}^{-1}$, based on the cathode mass) for low rates of discharge ($<C/10$) [63]. However, it is found that the power density of (CF) n /Li battery is low due to kinetic limitations associated with the poor electrical conductivity of (CF) n of strong covalency [64].
