

South tarawa water storage power plant operation

What is the South Tarawa water supply project?

The South Tarawa Water Supply Project (STWSP) will combat factors that result in the high incidence of waterborne disease in South Tarawa, the capital of Kiribati, through the delivery and effective management of new and rehabilitated climate-resilient water supply assets and improved hygiene practices.

How will South Tarawa reduce emissions?

This will be done through the construction of a 4,000 m³ desalination plant and a photovoltaic system to provide low-emission power for the plant and the water supply network. With this project, the residents of South Tarawa will no longer need to boil drinking water, reducing emissions from burning fuel and firewood.

How will South Tarawa reduce climate vulnerability?

With this project, the residents of South Tarawa will no longer need to boil drinking water, reducing emissions from burning fuel and firewood. This project aims to reduce the climate vulnerability of the entire population of South Tarawa through increased water security by providing them with a reliable, safe, and climate-resilient water supply.

When will the South Tarawa sanitation improvement project close?

Its most recent experience is the ongoing South Tarawa Sanitation Improvement Sector Project, approved in 2011, with additional financing approved in 2016. The project is on track and is due to close in 2019. Prior to that, the Sanitation, Public Health, and Environment Improvement Project was approved in 1998 and completed in 2005.

1. The draft South Tarawa Water Supply and Sanitation Roadmap 2011-2030 prepared under TA-7359 KIR finds that primary and secondary groundwater lenses for South Tarawa are at considerable risk, that water abstraction from freshwater galleries at Bonriki is 20% above the estimated sustainable capacity of the Bonriki reserves, and the Bonriki water

The South Tarawa Water Supply Project (STWSP) funded by ADB, the World Bank and the Green Climate Fund, will install a reverse osmosis desalination plant with a renewable energy offset. The project's solar photovoltaic and battery system component will be installed on the Bonriki water reserve.

only around 9% of demand on South Tarawa Diesel generation supply . the remaining 91%. The photovoltaic systems were financed mostly by development partners. In 2016, demand on South Tarawa, the largest in the country, was approximately 24.5 gigawatt-hours (GWh).

proportion of renewable energy electricity generation on South Tarawa, Kiribati. In 2019 a project preparatory technical assistance was undertaken and the feasibility study of a solar photo voltaic (PV) power plant located
