

Two-dimensional (2D) MXenes have garnered considerable critical acclaim in the realm of energy storage [1 ... Li X, Fang D, Chen S, Zhang S, Zhi C. Activating C-coordinated iron of iron hexacyanoferrate for Zn hybrid-ion batteries with 10 000-cycle lifespan and superior rate capability. Adv Mater. 2019;31(32):1901521. Google Scholar. 25.

@article{Li2023RoleOD, title={Role of different energy storage methods in decarbonizing urban distributed energy systems: A case study of thermal and electricity storage}, author={Zhi Li and Xiaohua Zhi and Zhanjun Wu and Gao Qian and Ruicheng Jiang and Bingzheng Wang and Rui Huang and Xiaoli Yu}, journal={Journal of Energy Storage}, ...

The novel functionalized porphyrin [5,15-bis(ethynyl)-10,20-diphenylporphinato]copper(II) (CuDEPP) was used as electrodes for rechargeable energy-storage systems with an extraordinary combination of storage capacity, rate capability, and cycling stability. The ability of CuDEPP to serve as an electron donor or acceptor supports various energy-storage applications.

Flexible polymer nanocomposites reinforced by high-dielectric-constant ceramic nanofillers have shown great potential for dielectric energy storage applications in advanced electronic and electrical systems. However, it remains a challenge to improve their energy density and energy efficiency at high temperatures above 150°C. Here, we report a nanofiber ...

Energy storage devices based on biomimetic organohydrogel (BM-gel) electrolyte. A, Digital photographs depicting two EA batteries connected in series, which lit up a high-power watch. B, Demonstration of the EA-battery tandem units to power an electroluminescent panel and mounted the demonstrator's wrist, powering a digital watch and a yellow LED.

Prof. Dr Zhigang Chen is currently an Honorary Professor in the School of Mechanical & Mining Engineering, the University of Queensland, and a founding director for the ARC Research Hub in Zero-emission Power Generation for Carbon Neutrality (ZeroPC), ARC Future Fellow, Academic Research Lead, and a Capacity Building Professor of Energy Materials at the School of ...

The Rise of Chalcogens for High-energy Zinc Batteries Chen, Z. & Zhi, C., 2024, Aqueous Zinc Batteries. Fan, H. J. (ed.). Singapore: World Scientific Publishing Co., p. 228-256 Research output: Chapters, Conference Papers, Creative and Literary Works > RGC 12 - Chapter in an edited book (Author) >

peer-review

Biomass energy storage remains an important global consideration for forest management and energy policy goals and therefore quantifying it is a vital step in achieving proper ecosystem management (Galik et al., 2021). ...

Renming Zhan, Xiancheng Wang, Zihe Chen, Zhi Wei Seh, Li Wang, and Yongming Sun\* DOI: 10.1002/aenm.202101565 ... technology for grid energy storage.[1-5] Energy density is one

DOI: 10.1038/s41893-022-00974-w Corpus ID: 252976494; Polymeric membranes with aligned zeolite nanosheets for sustainable energy storage @article{Xia2022PolymericMW, title={Polymeric membranes with aligned zeolite nanosheets for sustainable energy storage}, author={Yongsheng Xia and Hongyan Cao and Fang Xu and Yuxin Chen and Yu Xia and ...

Cost-effective energy storage plays a critical role in PV heating to solve the temporal mismatch between supply and demand. Herein, we propose the concept of using a building envelope as an active ...

Chunyi Zhi; Ze Chen; ... Zinc batteries are at the forefront of aqueous energy storage due to their intrinsic safety and low cost. Various vanadium oxides stand out among the few cathode ...

Guojin; Chen, Ao; Zhi, Chunyi Published in: EcoMat Published: 01/09/2020 ... energy storage featured with high safety, low costs, environmental friendliness, and satisfactory energy density. The aqueous electrolyte system exhibits great potential to power the future wearable electronics. Apart from the achieve-

energy storage featured with high safety, low costs, environmental friendliness, and satisfactory energy density. The aqueous electrolyte system exhibits great potential to power the future ...

Biography Prof. Zhi Chen is an Assistant Professor in the Department of Decisions, Operations and Technology, CUHK Business School, The Chinese University of Hong Kong. He obtained his PhD from NUS Business School, National University of Singapore and his BE from Tsinghua University, China. His primary research involves developing models and designing algorithms ...

The first report of metal-Te battery was in 2014, and it has been deeply investigated due to its potential for next-generation energy storage devices since then. Despite metal-Te batteries are suffering from the same problems as metal-S batteries, such as intermediates dissolution and large electrode volume change, the research direction can go ...

Interest in flexible and wearable electronics has surged in the past several years. The development of these electronics critically demands flexible and wearable energy storage devices (ESDs) that possess both high energy and power density and superior flexibility and durability to power various wearable systems. 1 Thus, extensive efforts have been ...

Rechargeable aqueous zinc ion batteries (AZIBs), as a rising star in aqueous ion batteries, are restricted by the narrow voltage window and the unsatisfactory reversibility, which are dominated by the high activity of  $H_2O$  molecules, side reaction, Zn dendrites, and structural degeneration of the cathode. Electrolyte manipulation has seen a great deal of research ...

Jiezhi Chen's 122 research works with 684 citations and 6,480 reads, including: Grain Size Reduction of Ferroelectric HZO Enabled by Solid Phase Epitaxy (SPE): Working Principle, Experimental ...

Prof. Dr. Zhi-Gang Chen is currently a Professor of Energy Materials in the Queensland University of Technology. In 2012, he won a Queensland International Fellowship to undertake a collaborative ...

Zhi YANG | Cited by 980 | of GuangDong University of Technology, Guangzhou | Read 77 publications | Contact Zhi YANG ... (CB) is a recently emerged large-scale power storage technology to solve ...

Sodium-ion battery (SIB) is a very promising alternative to lithium-ion batteries (LIBs) [[1], [2], [3]]. However, due to the larger ionic radius and weaker ion-substrate coupling interactions of  $Na^+$  compared with those of  $Li^+$ , one of the critical challenges for SIBs remains searching for efficient anode materials [1,2,[4], [5], [6], [7]]. Among many anode hosts, hard ...

Abstract. Rechargeable Zn-based batteries (RZBs) have attracted much attention and been regarded as one of the most promising candidates for next-generation energy storage featured ...
