What is a Materials Science degree at UCL?

This degree combines frontline research-based teaching from across UCL to train the next generation of materials scientists for sustainable energy and energy storage. Please see UCL website for full information about fees and costs for this programme.

What is advanced materials science (energy storage)?

Advanced Materials Science (Energy Storage) MSc relates scientific theories to research and applications of advanced materials, encourages innovation and creative thinking, and contextualises scientific innovation within the global market and entrepreneurship.

What can I do with an MSc Advanced Materials Science?

Whether your path leads you to academia or industry, our MSc Advanced Materials Science programs offer vital materials-research experience. Our MSc programs offer scientific and commercial expertise to design innovative, sustainable materials for the global market.

What is the energy storage program?

This program educates the essential foundations and practical facets of energy generation and storage, shaping future materials scientists and entrepreneurs. Gain the expertise to craft innovative materials, addressing pressing energy and environmental issues. Embark on your path to an energy storage-powered future right here.

What can I do with an MSc in Materials Engineering?

Our MSc programs offer scientific and commercial expertise to design innovative, sustainable materials for the global market. Whether your background is in science, technology, computing, or engineering, this MSc equips you with specialist skills for the dynamic international materials industry.

How many references do I need to apply to UCL?

This programme requires two references. Further information regarding references can be found on this [Selecting your references page](#). Please read the Application Guidance before proceeding with your application. Got questions? Get in touch UCL is regulated by the Office for Students.

Being a student at UCL is about so much more than just acquiring knowledge. In the heart of London, UCL gives you the ability to access a wide range of culture, entertainment and academic resources sides, UCL's campus on Queen Elizabeth Olympic Park (UCL East) opened recently offering exciting new degrees and the scale and space needed to tackle the biggest ...

This one-year MSc was co-developed with industry to equip students with interdisciplinary skills that are highly in demand. This programme provides comprehensive training in advanced materials, high-throughput experimentation, robotics, automation, digitalisation, machine learning and AI, readying its graduates for the laboratories and manufacturing sites of the future.

Overview. This Advanced Materials Science programme aims to equip University College London (UCL) students with advanced, comprehensive knowledge of materials science and related state-of-the-art technologies, an understanding of the structure, properties and applications of materials, scientific research skills, and the insight and capability to be an entrepreneur in the field.

Welcome to the Energy Materials & Storage Systems (EMS²) group in the Institute for Materials Discovery at the University College London. ... We are a highly motivated research team working on the design and synthesis of advanced materials for energy storage systems (conventional and planar designs) including Zn-ion batteries, Li-ion batteries ...

This degree combines frontline research-based teaching from across UCL to train the next generation of materials scientists for sustainable energy and energy storage. Entry requirements A minimum of a second-class Bachelor's degree from a UK university or an overseas qualification of an equivalent standard.

With global challenges in climate, environment, healthcare and economy demand, there is increasing need for scientific experts and entrepreneurs who can develop novel materials with advanced properties - addressing critical issues from energy to healthcare - and take scientific discoveries to the commercial world. You will be addressing critical issues from energy to healthcare and taking scientific discoveries to the commercial world. This degree combines frontline research-based teaching from across UCL to train the next generation of materials scientists. Why study Advanced Materials Science and become a Materials Scientist:

This comprehensive review embarks on a journey through the intriguing potentials of energy storage, driven by the exceptional properties of perovskite materials. We delve into three compelling facets of this evolving landscape: batteries, supercapacitors, and the seamless integration of solar cells with energy storage.

The rapid development of a wide range of novel materials and devices over the past few decades has increased the demand for scientific experts and entrepreneurs who can adapt them for real-world applications, addressing global challenges such as achieving affordable and clean energy, as well as industry innovation and infrastructures. This degree combines frontline enterprise

The programme aims to equip students with advanced, comprehensive knowledge of materials science and related state-of-the-art technologies, an understanding of the structure, properties and applications of materials, scientific research skills, and the insight and capability to be an entrepreneur in the field.

About this degree. This programme will equip you with advanced, comprehensive knowledge and expertise in data-driven materials science. You will learn about the computational materials modelling and machine learning methodologies needed to solve problems in materials science, particularly in the fields of regression and classification, feature extraction, and data clustering.
